

Fiber Optic Cleaning Wipes

In many industries, dust, contaminants, and residues can lead to performance degradation in optical components, electronic circuits, and laboratory equipment. Kimwipes Multi-Purpose Cleaning Wipes provide a non-abrasive, lint-free cleaning solution for sensitive surfaces such as fiber optic connectors, laboratory glassware, and precision electronic components.

Unlike standard tissues or cloths, Kimwipes are engineered with an ultra-low linting structure that effectively removes dirt without scratching or leaving fibers behind. These wipes are widely used in telecommunications, medical fields, laboratories, and high-precision industries where cleanliness is critical.

Features

Material	Highly absorbent, lint-free tissue
Dimensions	280 mm x 280 mm
Package	280 wipes per box
Application	Fiber optics, laboratory, electronics, optical lenses
Chemical Compatibility	Fully compatible with alcohol-based solvents and optical cleaners
Certifications	ISO 9001, CE, RoHS

Product Code: KIM280-1

Features

Material	Highly absorbent, lint-free tissue
Dimensions	370 mm x 420 mm
Package	140 wipes per box
Application	Fiber optics, laboratory, electronics, optical lenses
Chemical Compatibility	Fully compatible with alcohol-based solvents and optical cleaners
Certifications	ISO 9001, CE, RoHS

Product Code: KIM140-1
